Easy to tune

The new Tru-Arc+ is easier than ever to tune. With a larger tuning sweet spot, paper tuning will be a breeze, broadheads will fly like they are laser guided.

Easy initial set up

Initial setup and cam rotation is easier than ever to set. At a glance you can check the cams at rest or at full draw to see if they are set to the optimum location. (See your Tru-Arc+ tuning tips sheet)

More user friendly

All of the string pegs are located for easy removal of strings. There is no longer a need for a bowpress to change the draw length. All adjustments can be made easily. 2 cam sizes cover 8" of draw lengths in 1/2" increments.

Quieter and faster than ever

The new Tru-Arc plus is quiet as a mouse. Double module screws reduce module vibration. New cam profile and updated efficiency makes the Tru-Arc+ one of the fastest hybrid cams available.
